HIGH VOLTAGE TECHNOLOGY

DRAFT FOR REVIEW

Website design review — the current design.

A walkthrough of the new HVT website: the design direction, every homepage section, the key inner pages and the mobile experience, plus the points we need HVT to confirm before launch.

Prepared for
High Voltage Technology SA (Pty) Ltd

Date
19 October 2026

Status
Working preview, not yet live

AT A GLANCE

A corporate website built to win the confidence of utilities, EPC contractors and industrial clients.

The new site presents HVT as an established Southern African engineering group: technically capable, safety-led and ready for major infrastructure work. It is a complete, working website, not a mock-up. Everything shown in this document is a screenshot of the working preview.

1

Homepage

Twelve sections, from the hero to the project enquiry form, telling HVT's story in a clear order.

8

Service pages

One page for each HVT service line, with its full scope of work and a pre-selected enquiry form.

4

Project pages

Groeipunt, Bokmakierie, Mount Edgecombe and Kaalfontein, each with its photograph gallery.

6

Company pages

About, Quality & Safety, Social Impact, Contact, Privacy Notice and Image Credits.

What the design sets out to communicate

- **Engineering excellence:** precise, technically capable and dependable
- **Industrial credibility:** real projects, shown in HVT's own photographs
- **Safety and quality:** SHEQ leadership and ISO 9001:2015 certification
- **Scale and ambition:** work from 3.3kV to 765kV across the region
- **Southern African relevance:** a long-term partner to Eskom and utilities

Built in from the start

- Designed for phones and tablets as carefully as for desktop screens
- Keyboard-accessible navigation, with colour contrast chosen for readability
- Search-engine foundations: page titles, descriptions, sitemap and company details
- A project enquiry form with clear validation and POPIA-aware consent
- No advertising or tracking cookies

DESIGN DIRECTION

Built on HVT's existing identity, refined for a premium digital presence.

Colour

Signal amber	Midnight navy	Deep charcoal	Slate grey	Light grey
#FFA033 → #F07800	#081321	#171B20	#647181	#F3F5F7

The amber is taken directly from the HVT logo's gradient. It is used sparingly, for buttons, labels and key figures, so it signals importance. Navy, charcoal and soft greys carry the rest of the design.

Typography

Powering the infrastructure that moves Southern Africa forward.

Manrope for headings: confident and modern, with a two-tone treatment that gives headlines emphasis.

Inter for body text: highly legible at every size, on screens of every kind.

Logo

The supplied HVT artwork is used exactly as provided: the colour logo on light backgrounds, the reversed logo on dark, and the pylon symbol for the browser icon.

Photography

- **HVT's own photographs** for every project and service: real HVT sites and teams, captioned with the project they come from.
- **A few atmospheric images** (dusk transmission lines and substations) in the hero and banners. These are openly licensed, labelled "Illustrative image" and never presented as HVT projects.
- Dark, cinematic overlays give HVT's daylight site photos a consistent, premium feel.

HOMEPAGE · HERO

The first five seconds.

A full-width, cinematic hero establishes immediately what HVT does and who it serves.

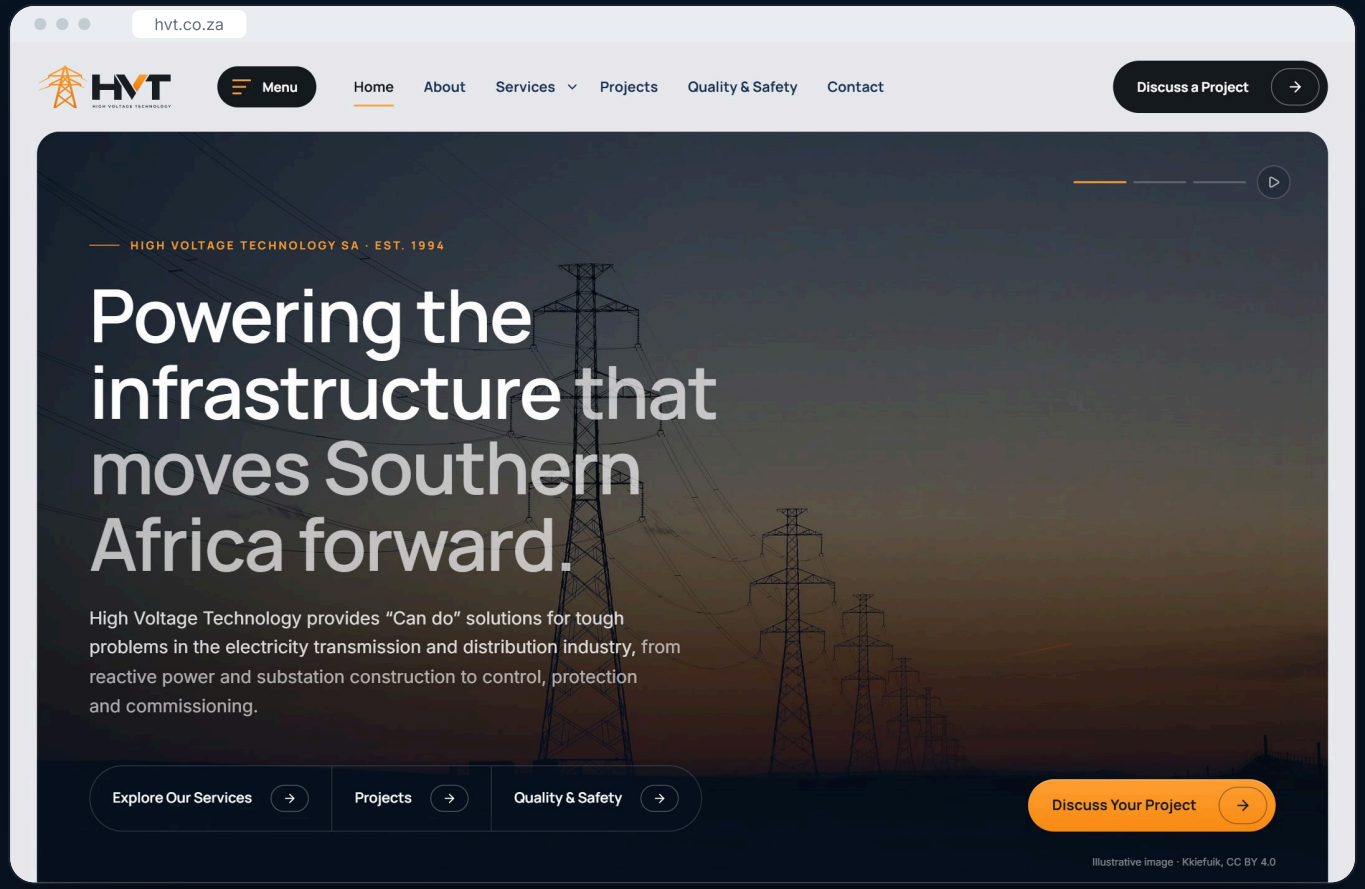

01 A clear headline and HVT's own "Can do" positioning

02 A prominent amber **Discuss Your Project** button that goes straight to the enquiry form

03 Quick routes to Services, Projects and Quality & Safety

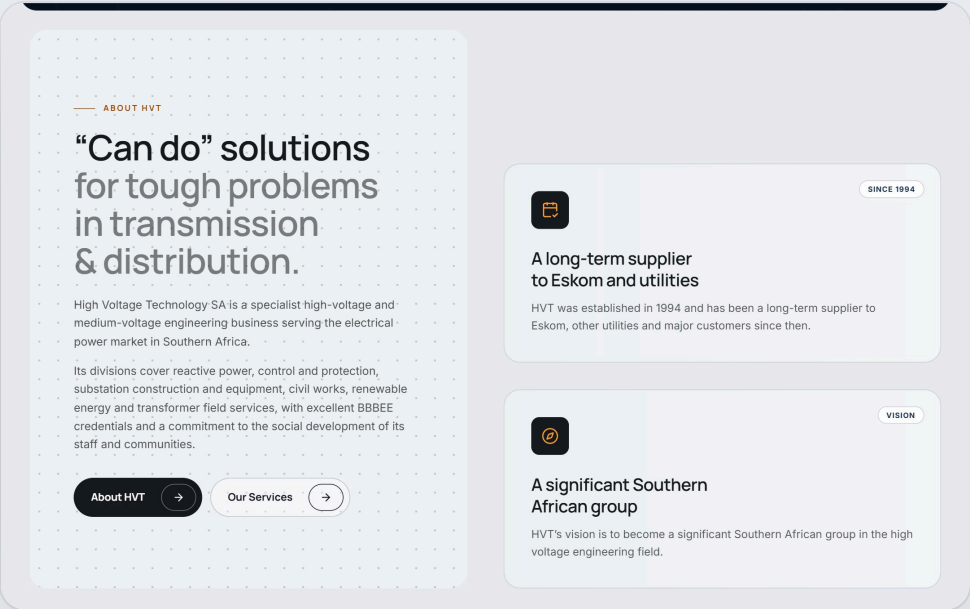

04 A slow, three-image slideshow with a pause control

05 A sticky header with a services menu and an always-visible **Discuss a Project** button

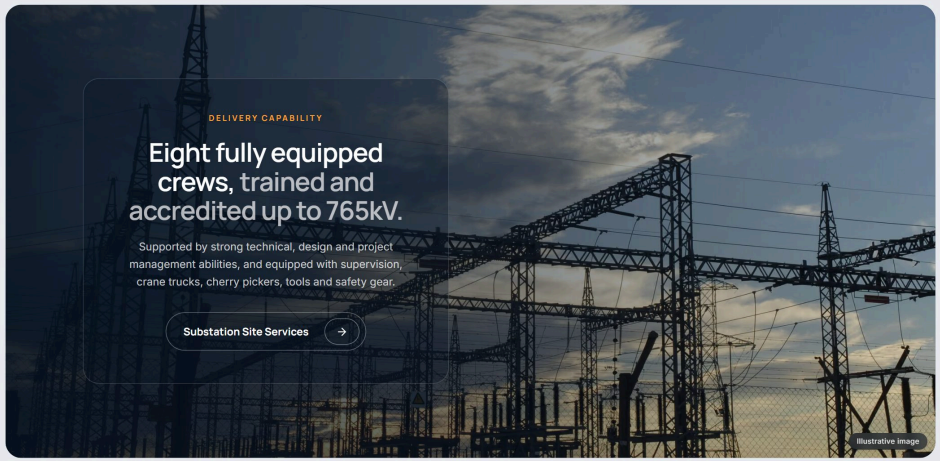

HOMEPAGE · 02–03

Who HVT is, and what it can deliver.

02 About HVT

A pinned introduction sits beside cards that scroll past it: established in 1994 as a long-term supplier to Eskom, HVT’s vision, the “Empower the person” philosophy and the four core values.

03 Delivery capability

A frosted-glass panel over a dusk substation highlights HVT’s eight fully equipped crews, trained and accredited up to 765kV, with a link to Substation Site Services.

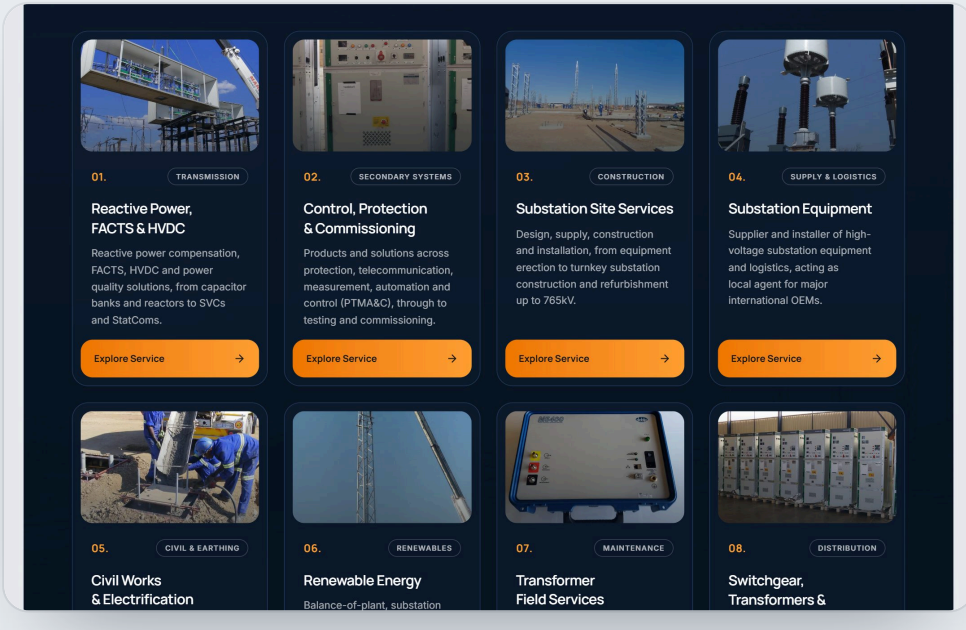

HOMEPAGE · 04–05

What HVT does, at a glance.

04 Transmission · Distribution · Substations

Oversized lettering that drifts gently as the visitor scrolls, framing an HVT photograph from the Bokmakierie Substation. It is a bold statement of HVT's field.

05 Core capabilities

Eight numbered service cards on a dark navy panel, each with an HVT photograph, a short description and an amber

Explore Service

bar leading to its own page.

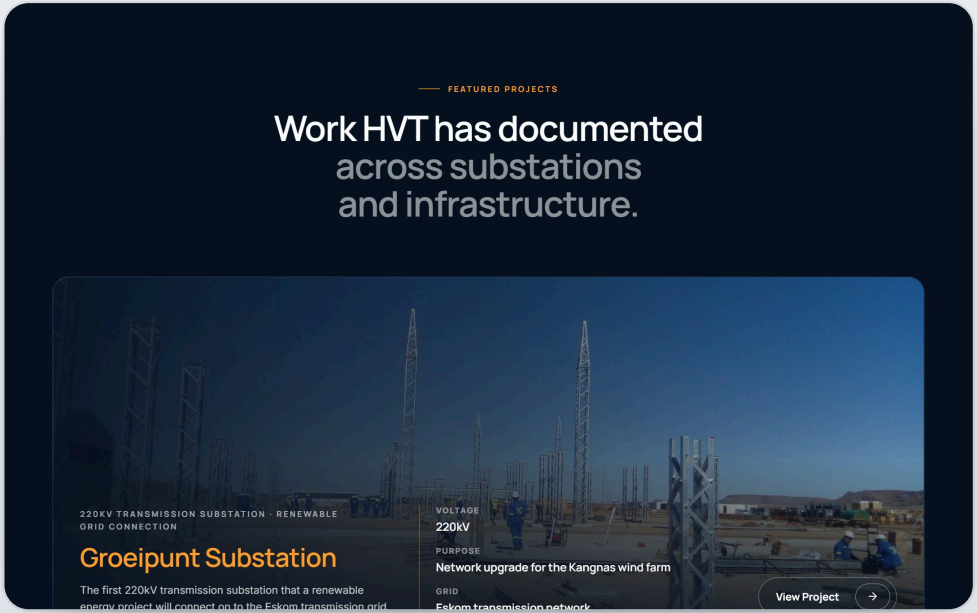

HOMEPAGE · 06–07

The proof, from HVT's published track record.

06 Credentials & track record

A headline statement built on HVT's published track record, followed by the key credentials (BBBEE Level 3, CIDB 8EP · 7CE, ISO 9001:2015, crews up to 765kV) and a summary of delivery capability.

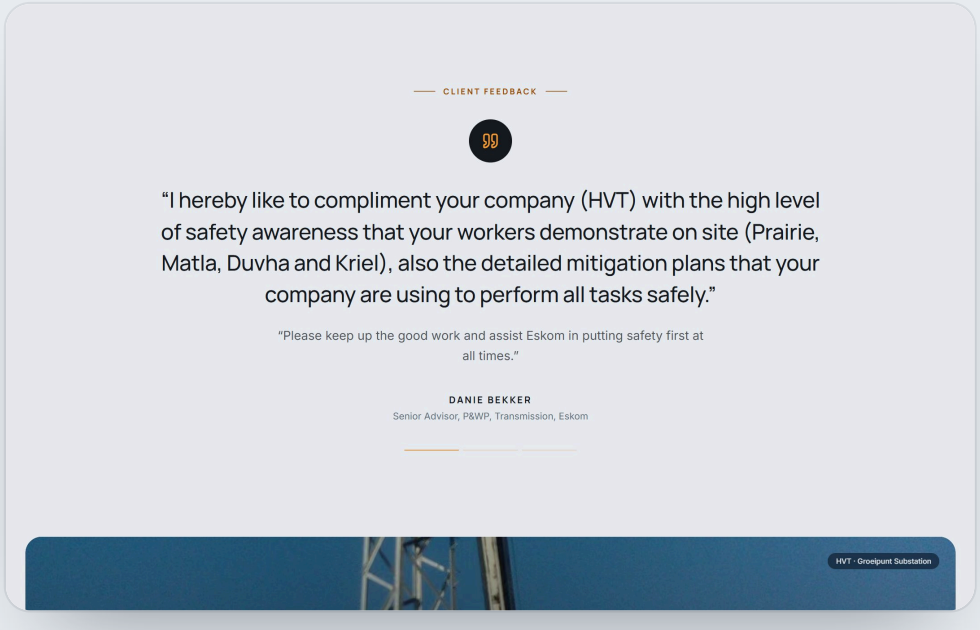

07 Featured projects

Full-width project banners for Groeipunt Substation, Bokmakierie Substation and the Mount Edgecombe Interchange, each with the facts HVT has published and a **View Project** button.

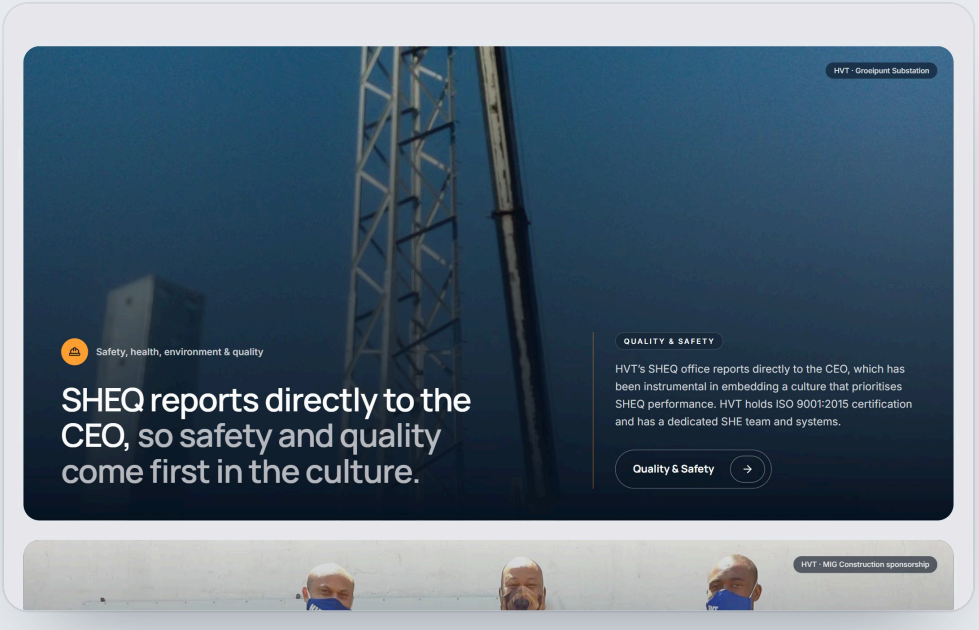

HOMEPAGE · 08–09

Safety and responsibility, front and centre.

08 Client feedback

The Eskom compliment on HVT's on-site safety awareness, reproduced word for word with its published attribution. No other testimonials are used.

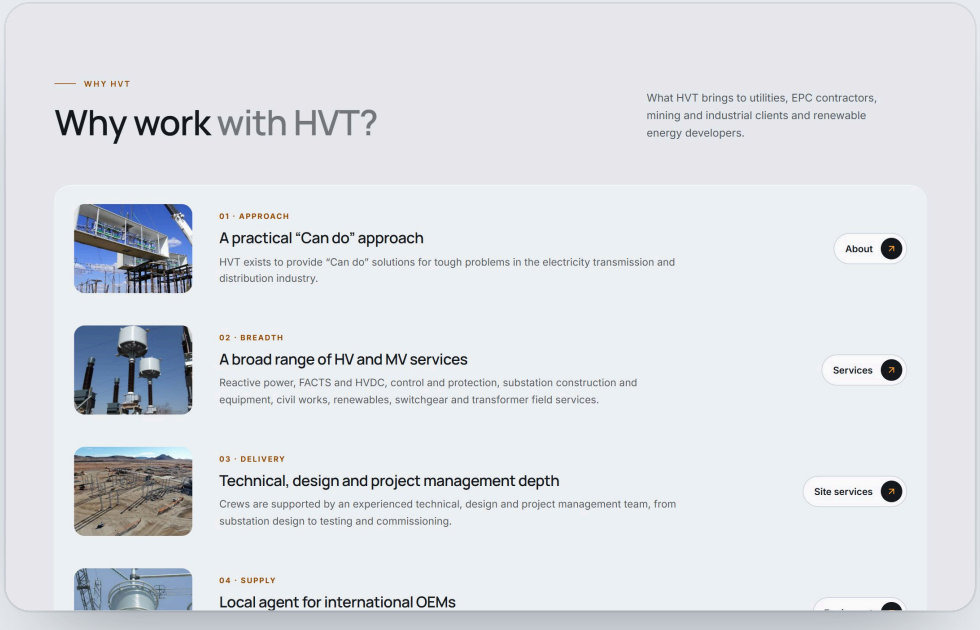

09 Safety and social impact stories

Two editorial feature panels. One covers SHEQ leadership (the SHEQ office reports directly to the CEO). The other covers enterprise development and support for emerging contractors.

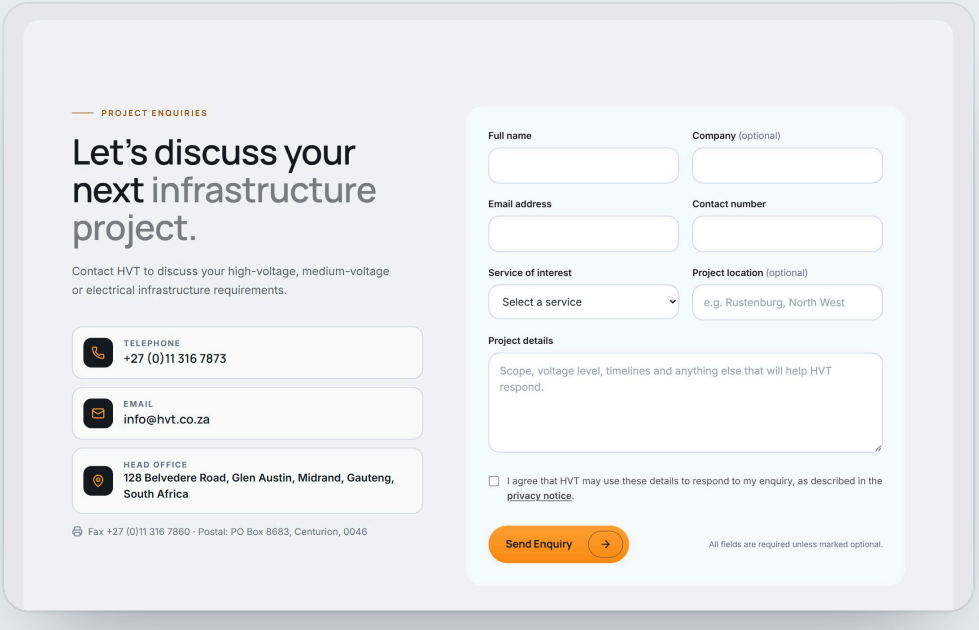

HOMEPAGE · 10–11

From reasons to choose HVT to starting a conversation.

10 Why work with HVT?

Six specific reasons, each linked to supporting detail: the “Can do” approach, service breadth, technical depth, OEM relationships, SHEQ management and Southern African focus.

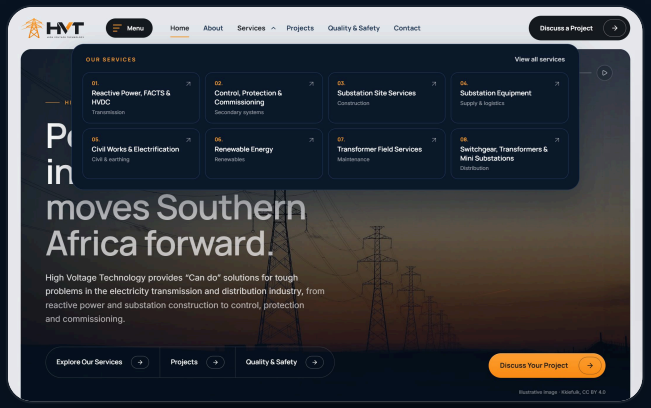

11 Project enquiry

Direct phone, email and head-office details beside a structured enquiry form: name, company, contact details, service of interest, project location and project details.

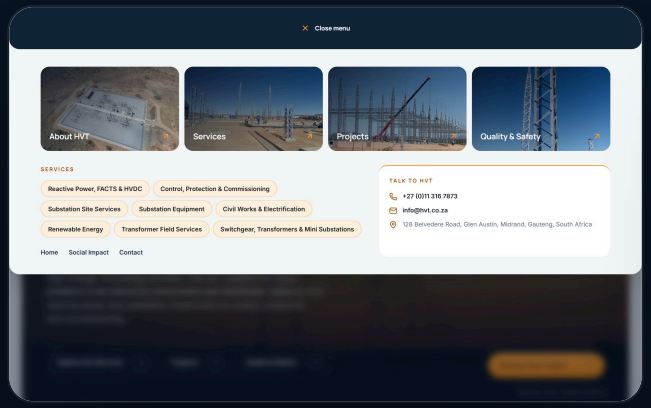

NAVIGATION

Every service is one click away, from any page.

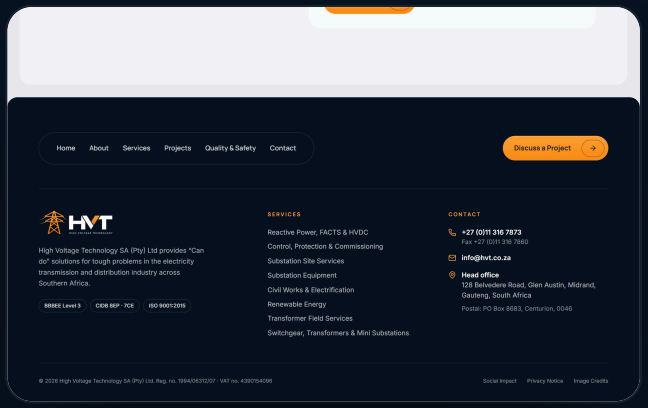

Services menu

Hovering over Services opens a panel listing all eight service lines.

Full menu

The Menu button opens a full-screen panel with image links, every service and HVT's contact details.

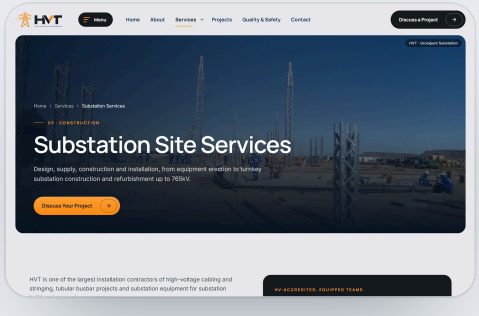

12 Footer

Navigation, all services, credentials, full contact details and company registration details.

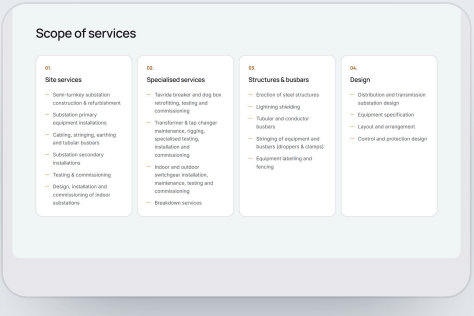

SERVICE AND PROJECT PAGES

Detail for procurement teams, in a consistent format.

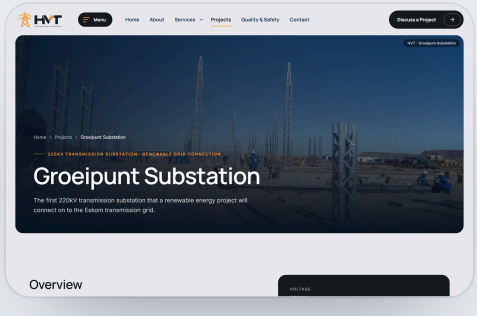

Service page

Each service opens with its own hero and a summary of HVT's capability.

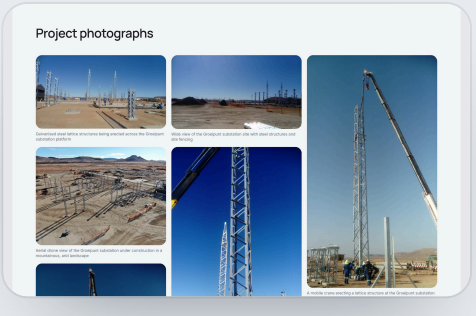

Scope of services

The full scope, grouped clearly, followed by photographs and an enquiry form with that service already selected.

Project page

An overview and key facts. Where HVT has not published a detail, the page says so.

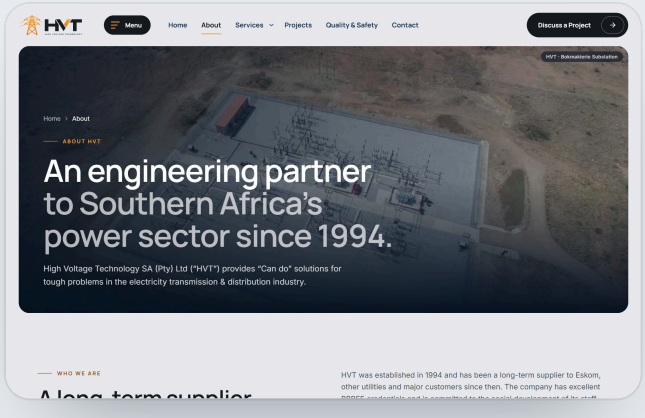

Project gallery

HVT's project photographs, each with a descriptive caption.

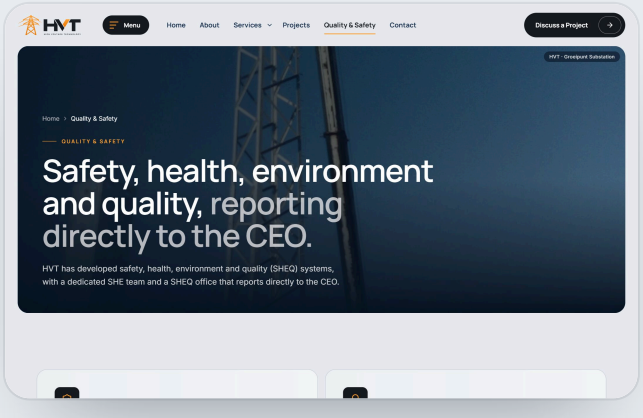

COMPANY PAGES

HVT's story, standards and track record.

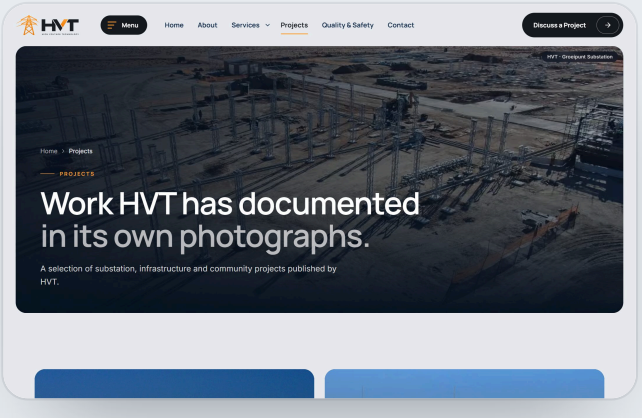

About

Company overview, vision and values, a timeline from 1994, leadership, group companies and credentials.

Quality & Safety

SHEQ leadership, quality certification, health and safety, environment, accredited crews and the Eskom feedback.

Projects

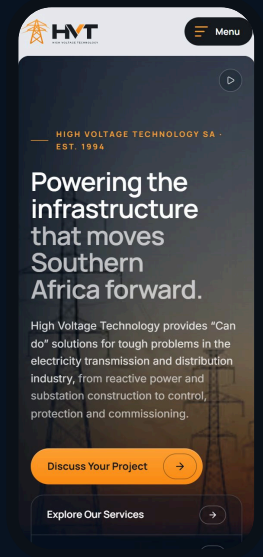

All four documented projects, including the Kaalfontein community electrification work.

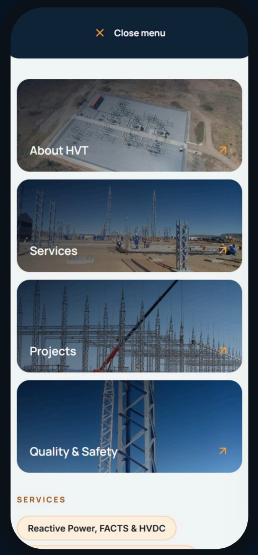

MOBILE EXPERIENCE

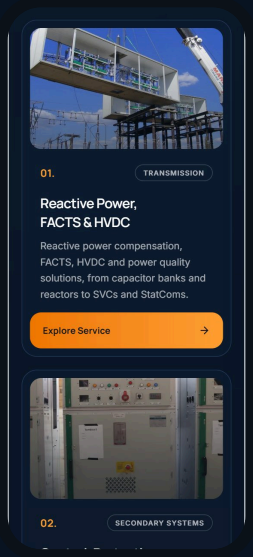

Designed for the phone, not just shrunk to fit.

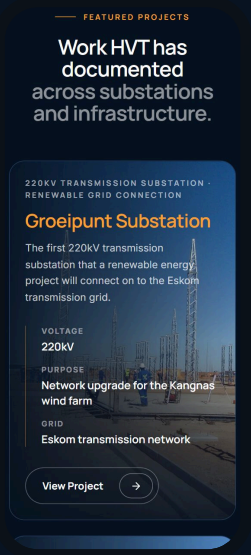

Many visitors, from site engineers to procurement teams, will first see HVT on a phone. Every section has its own mobile layout:

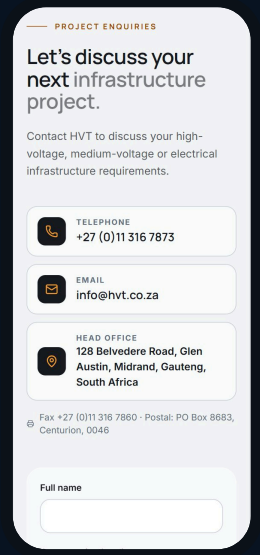

- Large, easy-to-tap buttons
- Content stacked in a sensible reading order
- Comfortable text sizes, no sideways scrolling
- A full-screen menu with image links
- Tap-to-call and tap-to-email contact details

CONTENT ACCURACY

Every fact comes from HVT's own published material.

All content was taken from hvt.co.za. We have not added statistics, clients, awards or testimonials that HVT does not publish. In a few places HVT's current pages disagree with each other. In each case we used the most recent wording, shown below, and we need HVT to confirm it.

Topic	What different pages of hvt.co.za currently say	Used on the new site	Why
BBBEE	Level 3 (BBBEE page and homepage headline); Level 2 (a homepage bullet); Level 1 (history page, 2018)	**Level 3 (BYO & BWO)**	Most recently updated page
CIDB grading	8EP / 7CE PE (About page); EP7 or 7EP (older pages)	**8EP · 7CE (PE)**	Newer wording
ISO certification	ISO 9001:2015 (About page and the 2023 certification mark); ISO 9001:2008 (older text)	**ISO 9001:2015**	Matches the current certification mark
ISO 14001 / 18001	"Preparing to achieve" formal accreditation (2018 wording)	**Not claimed**	Dated; HVT to advise on current status
Service list	Two different lists on the two homepages	**The newer list of 8 services**	More complete and current

WHAT WE NEED FROM HVT

Please confirm or update the following before the site goes live.

Credentials and figures

- [ ] **BBBEE Level 3 (BYO & BWO)**, **CIDB 8EP / 7CE (PE)** and **ISO 9001:2015** are all current
- [ ] Track-record figures still stand: **600+ reactive power projects** (3.3kV–765kV), **95%+ of Eskom HV shunt capacitor banks**, **8 crews accredited up to 765kV**, supplier to **Eskom's 765kV build programme**
- [ ] Current status of ISO 14001 / ISO 45001, if HVT would like it shown
- [ ] The CEO profile for Ganas (Boogie) Naidoo is up to date

Projects, people and permissions

- [ ] Permission to quote **Danie Bekker (Eskom)** in the testimonial
- [ ] Any project details HVT is happy to publish, such as scope, client, location and dates (Groeipunt, Bokmakierie, Mount Edgecombe)
- [ ] Which social development initiatives are still current
- [ ] Confirmation that HVT's gallery photographs may be reused on the new site
- [ ] The inbox that should receive website enquiries (currently **info@hvt.co.za**)
- [ ] A review of the Privacy Notice by HVT's compliance contact, and the name of HVT's Information Officer

★ **Recommended:** a short professional photo shoot at an active HVT site at dusk or early morning. Replacing the illustrative hero images with HVT's own cinematic photography would make the site stronger still.

HVT
HIGH VOLTAGE TECHNOLOGY

NEXT STEPS

From review to launch.

01

Review
Share feedback on the design, content and imagery.

02

Confirm
Work through the confirmation checklist on page 15.

03

Connect
Link the enquiry form to HVT's inbox and set up hosting.

04

Launch
Final checks, then go live on hvt.co.za.
